Maritime

You built an agent!

Now What?

When you jokingly send your localhost link to some stranger online to view your website and they convey bugs in the backend script ..

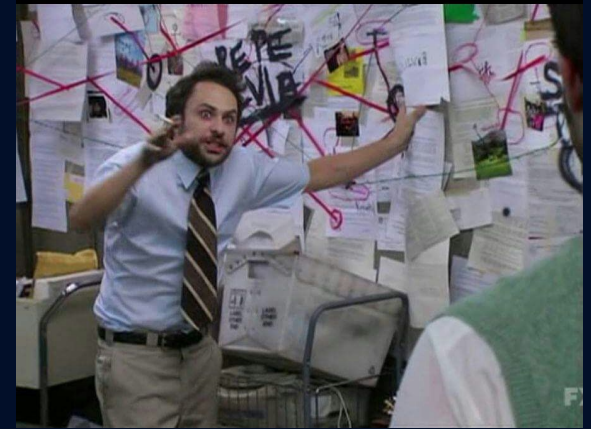

How do you share with friends? Customers? Scale?

Your Options

Custom setup of containers/VMs

Better option

How to Be a Happy Developer

Great things about maritime

- Easy to deploy an agent like OpenClaw/Hermes (1 min) or custom agents with any framework
- Very Cheap. \$1 a month per agent. You can finally scale!
- Obv secure, user isolation on microVMs
- We handle instances for you. So you can duplicate your agent easily and share with friends/customers
- We have SDK (add to your app/startup) or CLI (give to your coding agent)
